SIMATS ENGINEERING (SAVEETHA SCHOOL OF ENGINEERING)

Department of Computer Science and Engineering

CO1 ASSESSMENT TOOL 2 – Agile Sprint Planning & User Story Workshop

Course Code:	CSA1011	**Course Title:**	Software Engineering
CO Assessed:	CO1	**Assessment:**	Assessment Tool 2 – **Agile Sprint Planning & User Story Workshop**
Weightage:	20%	**Total Marks:**	25
CO1 Statement:	*Apply advanced methodologies and agile project management techniques to manage software projects effectively*		
Student Name:	HARIHARAN.R	**Reg. No.:**	192524003
Date:	11/10/2026	**Duration:**	60 minutes

Code of Conduct

I _____HARIHARAN.R(192524003)_____ (Name / Reg No) certify that this submission is my original work and that I have adhered to the guidelines specified for this assessment. I understand that any violation of academic integrity rules will result in disciplinary action.

Signature of the Student: _____HARIHARAN.R_____

Annexure A – Agile Sprint Planning & User Story Workshop

Instructions to Students:

Each student is assigned an individual software project problem statement. Based on the given problem statement, perform an **Agile Sprint Planning and User Story Workshop** by applying Agile software engineering practices. Prepare a comprehensive sprint planning document covering the following aspects:

Based on the given problem statement, perform an **Agile Sprint Planning and User Story Workshop** by applying Agile software engineering practices. Prepare a comprehensive sprint planning document covering the following aspects:

1. **Identify the Project Vision and Stakeholders**
   - Define the project's vision, objectives, and identify all key stakeholders involved.
2. **Create Epics and User Stories**
   - Break down the requirements into Epics and formulate well-structured User Stories using the format: *As a <user>, I want <feature>, so that <benefit>.*
3. **Define Acceptance Criteria**
   - Write clear and measurable acceptance criteria for each selected user story using the Given–When–Then format or equivalent.
4. **Prioritize the Product Backlog**
   - Organize and prioritize the product backlog based on business value, customer needs, and project dependencies.
5. **Plan the Sprint Backlog**
   - Select high-priority user stories for the first sprint and divide them into actionable development tasks.
6. **Estimate Effort Using Story Points**
   - Assign story points to each selected user story using an appropriate estimation technique (e.g., Fibonacci sequence or Planning Poker) and justify your estimates.
7. **Present the Sprint Goal and Expected Deliverables**
   - Define a clear sprint goal and describe the expected sprint deliverables, including the features to be completed at the end of the sprint.

Rubrics for Calculation

Criteria	Excellent (5 Marks)	Good (3 Marks)	Satisfactory (2 Marks)	Needs Improvement (1 Mark)
Project Vision & Stakeholder Identification (30%)	Project vision is clear, comprehensive, and aligned with the problem statement. All relevant stakeholders and their roles are correctly identified.	Vision is clear with minor omissions. Most stakeholders are correctly identified.	Vision is partially defined. Some stakeholders are missing or incorrectly identified.	Vision is unclear or incomplete. Stakeholders are poorly identified or missing.
Epics & User Stories (25%)	Epics are well-defined and user stories are complete, follow Agile format, and fully capture functional requirements.	Epics and user stories are mostly complete with minor formatting or requirement issues.	User stories are partially complete with limited Agile structure.	User stories are incomplete, unclear, or do not follow Agile practices.
Acceptance Criteria (20%)	Acceptance criteria are specific, measurable, testable, and aligned with all user stories.	Acceptance criteria are mostly clear and testable with minor gaps.	Acceptance criteria are partially defined and lack clarity or completeness.	Acceptance criteria are missing or not aligned with user stories.
Product Backlog Prioritization & Sprint Planning (15%)	Product backlog is logically prioritized, sprint backlog is realistic, and task breakdown is complete.	Backlog prioritization and sprint planning are mostly appropriate with minor issues.	Prioritization or sprint planning is partially complete with limited justification.	Backlog prioritization and sprint planning are poorly organized or incomplete.
Story Point Estimation, Sprint Goal & Presentation (10%)	Story point estimation is well justified, sprint goal is clear, deliverables are realistic, and presentation is professional and well organized.	Estimation and sprint goal are mostly appropriate with minor inconsistencies. Presentation is clear.	Estimation or sprint goal lacks justification. Presentation is adequate but incomplete.	Estimation is unrealistic or missing. Sprint goal, deliverables, and presentation are unclear or incomplete.

Criteria	Mark
Project Vision & Stakeholder Identification **(30%)**	/5
Epics & User Stories **(25%)**	/5
Acceptance Criteria **(20%)**	/5
Product Backlog Prioritization & Sprint Planning **(15%)**	/5
Story Point Estimation, Sprint Goal & Presentation **(10%)**	/5
TOTAL	/25

Online Doctor Appointment System
Build a platform where patients can search for doctors, view available slots, and book appointments
online.
ANSWER::

INTRODUCTION::

The Online Doctor Appointment System is a web-based application designed to make the process of booking medical appointments simple, fast, and convenient. Patients can register on the platform, search for doctors based on their specialization, view available appointment slots, and book appointments online. The system helps reduce waiting time in hospitals and eliminates the need for patients to visit clinics just to schedule appointments. Doctors can manage their availability and view their appointment schedules, while administrators can manage patient records, doctor information, and booking details. The application provides a user-friendly interface and improves the efficiency of healthcare appointment management.

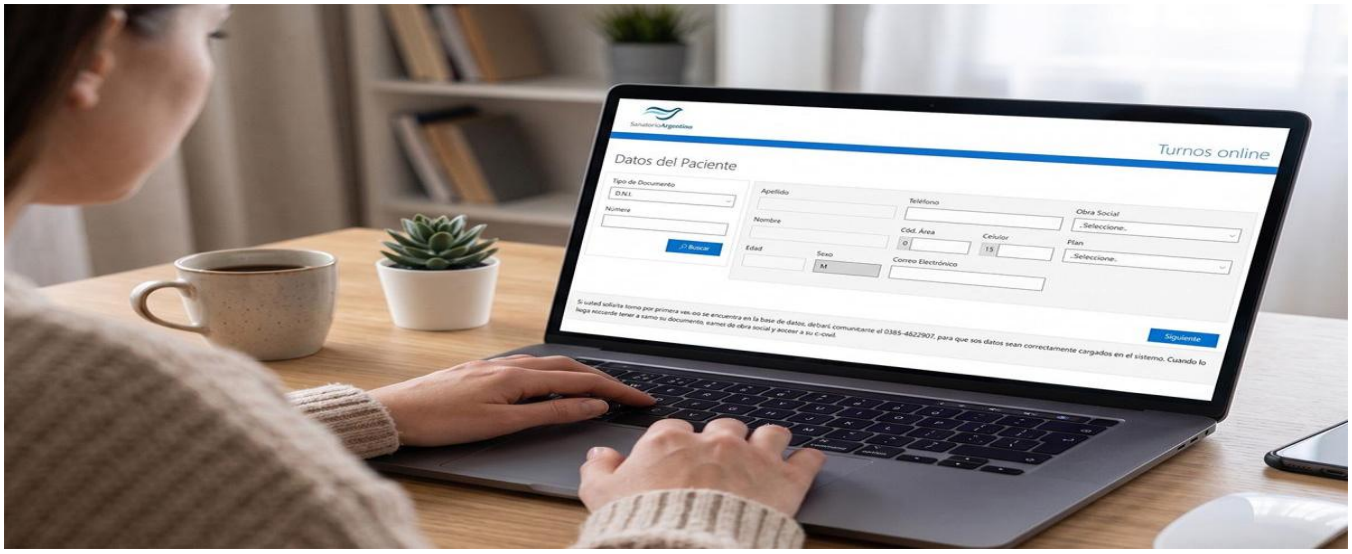

2. Aim of the Project

To develop a web-based application that allows patients to search for doctors, check their availability, and book medical appointments online efficiently.

3. Objectives

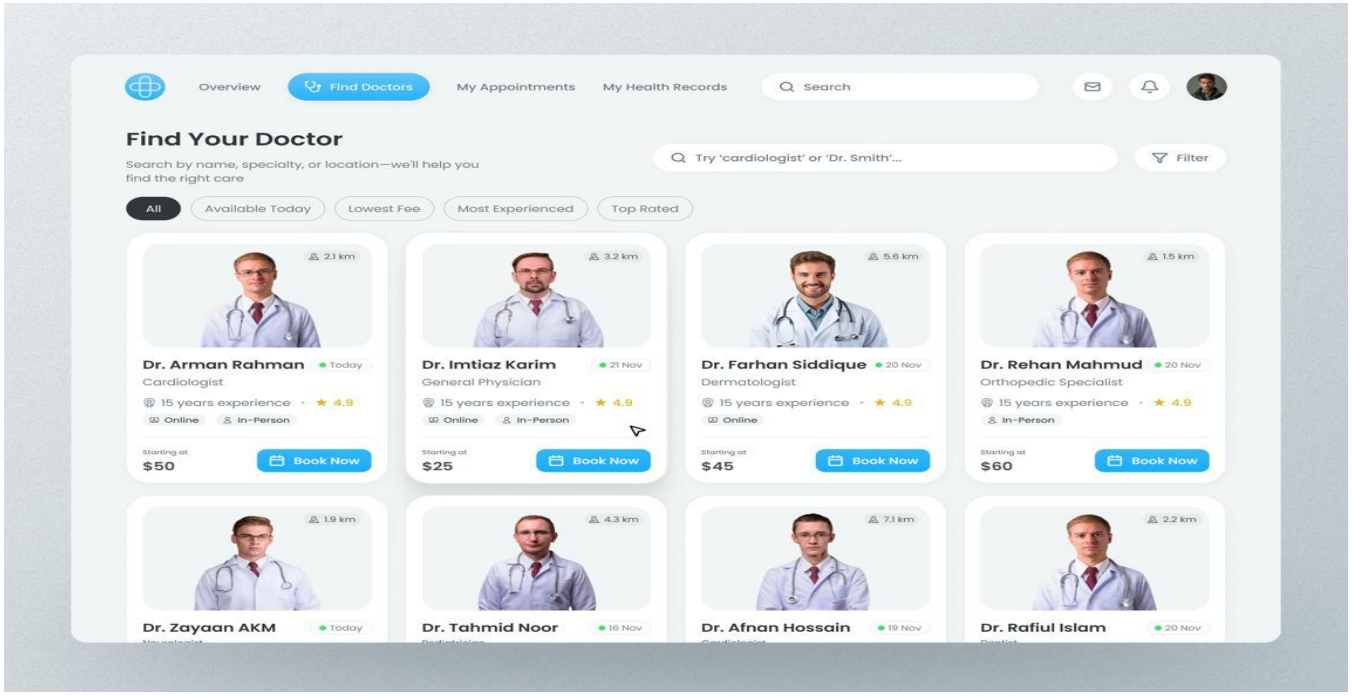

1. To provide easy online doctor searching and appointment booking.
2. To allow patients to view doctors' specializations and available time slots.
3. To reduce waiting time and manual appointment scheduling.
4. To help doctors manage their schedules and patient appointments.
5. To maintain appointment details in a centralized database.
6. To provide a simple and user-friendly healthcare booking platform.

4. Methods Involved

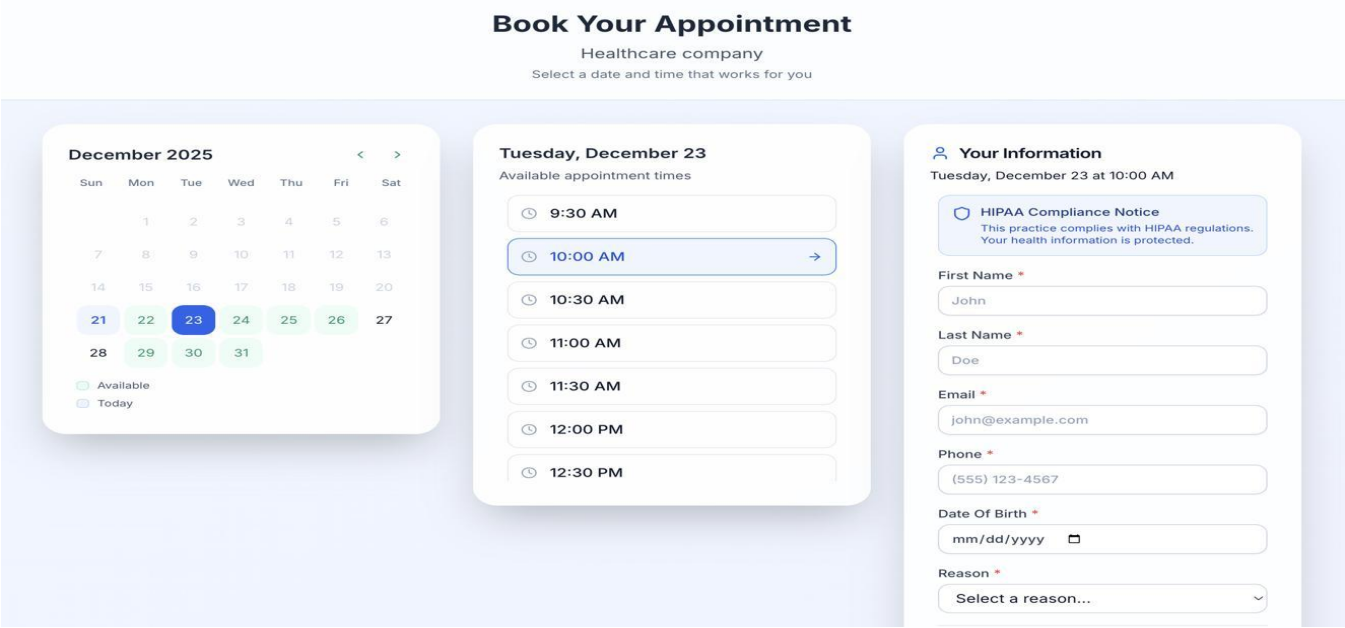

1. User Registration and Login

Patients and doctors can log in using their credentials. Registration details are stored in the database.

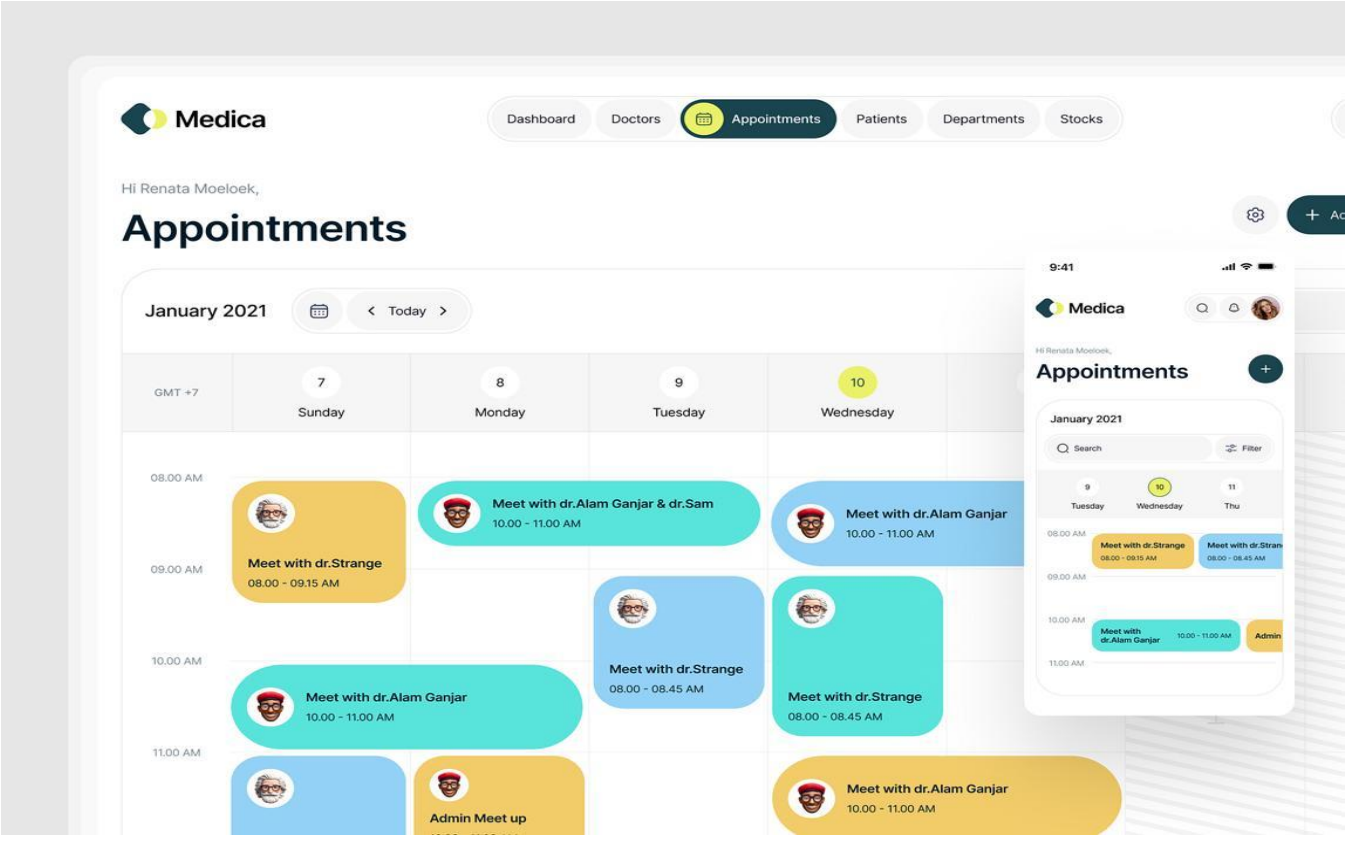

2. Doctor Search and Filtering

Patients can search by doctor name, specialization, or department to find a suitable doctor.

3. Appointment Scheduling

Patients select an available date and time. The system checks availability before saving the appointment.

4. Appointment Management

Patients can view or cancel bookings, and doctors can view their upcoming appointments

5. Technologies Used

Component	Technology
Frontend	HTML, CSS, JavaScript
Backend	Python Flask
Database	SQLite
Development Tool	PyCharm or VS Code
Browser	Google Chrome
Operating System	Windows

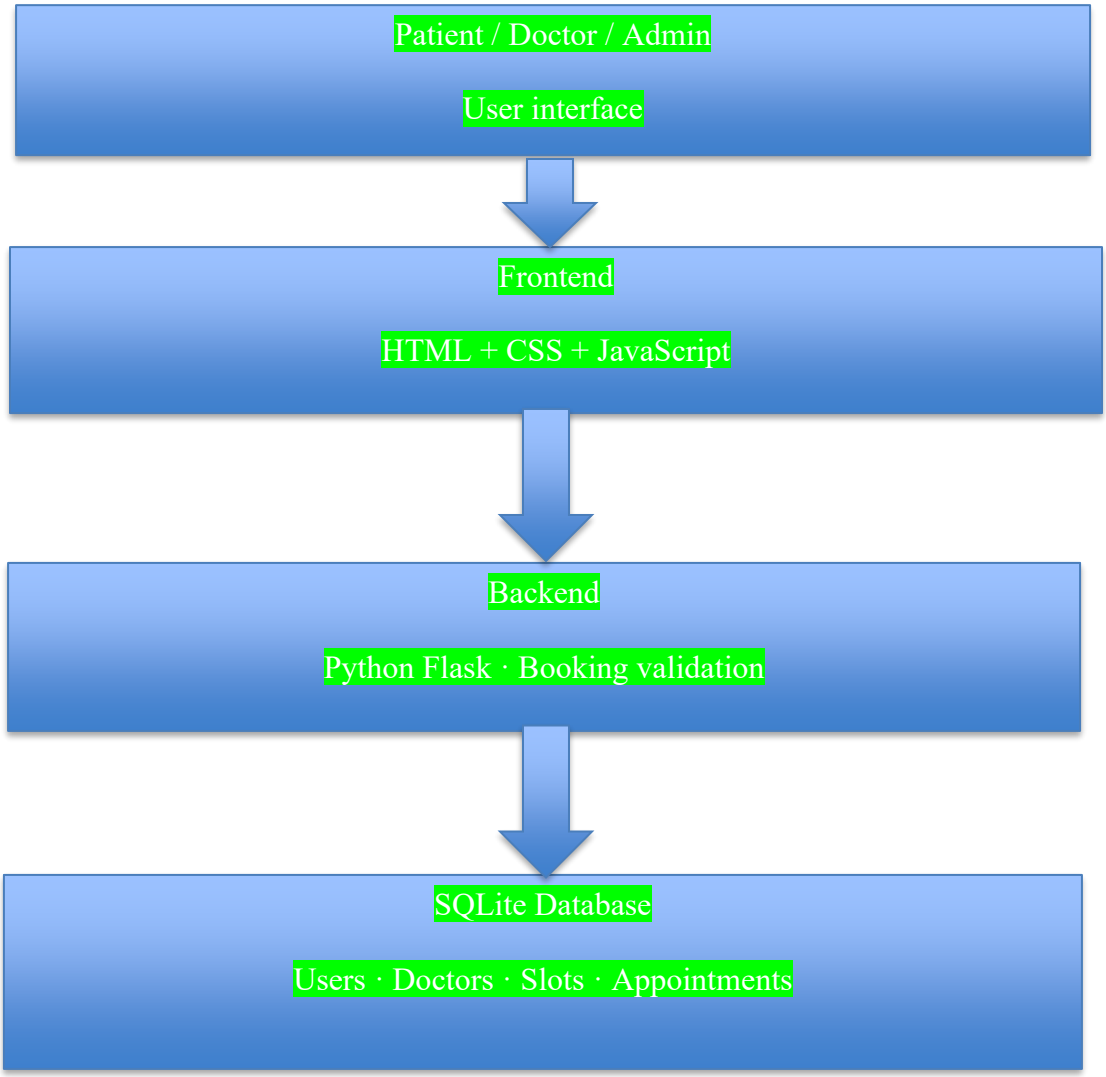

6. Main Modules

1. Patient Module – Registration, login, doctor search, and appointment booking.
2. Doctor Module – Doctor profiles, specialization, available slots, and appointment schedules.
3. Appointment Module – Booking, cancellation, and appointment status tracking.
4. Admin Module – Managing doctor details, patient information, and appointments.
5. Notification Module – Displays booking confirmation and appointment status messages.

7.Database Tables

Table	Important Fields
Patients	patient_id, name, email, password
Doctors	doctor_id, name, specialization, availability
Appointments	appointment_id, patient_id, doctor_id, date, time, status
Admin	admin_id, username, password

8. System Architecture

8. Functional Requirements

1. Patient registration and login.
2. Doctor search by specialization.
3. Displaying available appointment dates and times.
4. Booking an appointment and preventing duplicate bookings.
5. Viewing and cancelling appointments.
6. Doctor schedule management.
7. Admin management of doctors and appointments.

9. Implementation Steps

- Create a project folder: OnlineDoctorAppointment
- Create the following files and folders:
- text OnlineDoctorAppointment/ ├── app.py ├── requirements.txt ├── templates/ │ ├── index.html │ ├── login.html │ ├── register.html │ ├── doctors.html │ └── appointments.html └── static/ └── style.css
- Install Flask: Open the PyCharm terminal and run:
- bash pip install flask
- Develop the backend: Add routes for registration, login, doctor search, appointment booking, and cancellation in app.py.
- Develop the frontend: Add HTML pages and colorful CSS styling.
- Run the application: Execute app.py and open the local URL displayed in the terminal, usually http://127.0.0.1:5000/.

10.Conclusion

The Online Doctor Appointment System provides a convenient and efficient way to manage medical appointments through a web-based platform. It enables patients to search for doctors, check available slots, and book appointments without visiting hospitals for scheduling. The system also helps doctors manage their schedules and assists administrators in maintaining appointment records. By combining Python Flask, HTML, CSS, JavaScript, and SQLite, the project offers an affordable and practical solution for digital healthcare appointment management.
